

ATAGENIX LABORATORIES

Catalog Number:ATMA10064Mo Anti TBP mouse monoclonal antibody

Product overview

product name	Anti TBP mouse monoclonal antibody		
catalog No.	ATMA10064Mo		
Category	Primary antibody		
Host	Mouse		
Species specificity	Human,Predict react with Rat,Mouse		
Tested applications	WB		
Clonality	Monoclonal		
Clone No.	53A2		
Conjugation	Unconjugated		
Immunogen	Sythesis peptide from N-terminal.		
Alternative Names	TATA-box-binding protein,TATA sequence-binding protein,TATA-binding factor,		
	TATA-box factor, Transcription initiation factor TFIID TBP subunit.		
Uniprot ID	P20226		
Product performance			
Form	Liquid		
Buffer	Supplied as solution form in PBS, pH7.4, containing 0.02% NaN3, 50% glycerol.		
Storage	Use a manual defrost freezer and avoid repeated freeze thaw cycles. Store at 4 $^\circ\mathrm{C}$		
	for frequent use. Store at -20 to -80 °C for twelve months from the date of receipt.		
Concentration	0.5mg/ml		
Isotype	lgG1		
MW	33-43kDa		
	Protein G purification		
Purity	Protein G purification		
Purity Dilution range	Protein G purification

Various lysates were subjected to SDS PAGE followed by western blot with TATA binding protein antibody at dilution of 1:2000.					

Lysate:20µg/ml Lane 1:K562 cell line Lane 2:HEK293 cell line

Predicted band size:45kDa Observed band size:45kDa

Various lysates were subjected to SDS PAGE followed by western blot with TATA binding protein antibody at dilution of 1:2000.

Immunofluorescent analysis of H929 cells using α TATA binding protein antibody at dilution of 1:100 and Alexa Fluor-488 conjugated Affinipure Goat anti mouse IgG(H+L).

Product background

The TATA binding protein (TBP) is a transcription factor that binds specifically to a DNA sequence TATA box. This DNA sequence is found about 25-30 base pairs upstream of the transcription start site in some eukaryotic gene promoters. TBP, along with a variety of TBP-associated factors, make up the TFIID, a general transcription factor that in turn makes up part of the RNA polymerase II preinitiation complex. As one of the few proteins in the preinitation complex that binds DNA in a sequence-specific manner, it helps position RNA polymerase II over the transcription start site of the gene.
