

## Product Details

### Summary

<b>Catalog#</b>	ATEP02466COV
<b>description</b>	Recombinant SARS-CoV-2 E protein is produced by E.coli expression system and the target gene encoding Met1-Val75 is expressed with N-His-sumo Tag
<b>Expression system</b>	E.coli
<b>Species</b>	Severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2)
<b>Accession #</b>	QHD43418.1
<b>Alternative names</b>	2019-nCoV E protein, 2019-nCoV sM protein
<b>Predicted Molecular Mass</b>	21.04kDa
<b>Purity</b>	>90% as determined by SDS-PAGE
<b>Endotoxin level</b>	Please contact with the lab for this information
<b>Formulation</b>	Supplied as solution form in PBS, pH7.4/ Supplied as lyophilized from PBS, pH7.4
<b>Shipping</b>	In general, proteins are shipped out with blue ice unless customers require otherwise.
<b>Stability &amp; Storage</b>	Use a manual defrost freezer and avoid repeated freeze thaw cycles.  Store at 2 to 8 °C for one week .  Store at -20 to -80 °C for twelve months from the date of receipt.
<b>Reconstitution</b>	Reconstitute in sterile water for a stock solution.
<b>Application</b>	Immunogen

### SDS-PAGE image

### Background

Coronavirus envelope (E) proteins are short (100 residues) polypeptides that contain at least one transmembrane (TM) domain and a cluster of 2-3 juxtamembrane cysteines. These proteins are involved in viral morphogenesis and tropism, and their absence leads in some cases to aberrant virions, or to viral attenuation. In common to other viroporins, coronavirus envelope proteins increase membrane permeability to ions, plays a central role in virus morphogenesis and assembly. Acts as a viroporin and self-assembles in host membranes forming pentameric protein-lipid pores that allow ion transport. Also plays a role in the induction of apoptosis. Activates the host NLRP3 inflammasome, leading to IL-1beta overproduction.

## Product performance

---

Form

Recombinant 2019-nCoV E protein

## Note

---

For research use only.
